

Baby of Mine

# Creating a Family Share Site

Taking care of a baby can be exhausting, leaving you little time to stay in touch with far-flung friends and family. Why not create a Family Share site?

Family Share sites are free private websites that let you easily share photos and videos. Plus, you can access and manage your Family Share site on the go with our Shutterfly Share sites iPhone app.

## **TIPS FOR SETTING UP YOUR SHARE SITE**

Set up the website well before the due date. That way, you'll have more time to choose a design, add features and invite members before baby is here. Plus, you can add photos from your baby shower and create links to your baby registry.

Set the permission levels on your site so that only the people you want to see the photos can have access. Ensure privacy by limiting access to members only or creating an optional password for all visitors.

Invite loved ones who have seen (and taken snapshots of) your baby to become members of your family website, and then give them contributor privileges so they can upload their photos. The more photographers, the more photos!

You can create a separate album or site page for each milestone or take regularly scheduled photos of your baby with the same backdrop, so everyone can see your child growing.
